Futureproof on-shore power supply in the port of Duisburg

In order to achieve the European targets for reducing greenhouse gas emissions in shipping, the Port of Duisburg will provide additional on-shore power connections. With this on-shore power supply, you will be prepared for future requirements. The elimination of diesel generators in the port also means that you will have less pollution in the form of noise and fumes. The supply is provided at on-shore power connections during berthing periods. There are currently six of these supply points available in the port area, and these will be further expanded to provide power to the majority of berths by 2025.

Stadtwerke Duisburg is your competent contact for queries regarding electricity billing and is responsible for the smooth operation of the on-shore power connections.

Authentication is easy with your personal CUSTOMERCARD, which you can use to purchase your green electricity via the supply points. Apply for your CUSTOMERCARD now at www.swdu.de/landstrom.

Advantages:

- 'No hassle' fulfilment of legal requirements
- Low emission of noise and fumes during berthing periods
- Reduction in greenhouse gas emissions
- Certified power from renewable energy sources

i On-shore power – The secure supply of power in the port of Duisburg

With our on-shore power and the CUSTOMERCARD from Stadtwerke Duisburg, you can easily charge your vessel as an inland skipper. And with certified green electricity to boot!

Do you have any questions? We are pleased to be there for you.
